

☐ + ° - ***Hackathon project*** ☐ ☐

↳ *Brought to you by: Shyanne, Julia ,Kharis*

□ . ★ ° 9 *our theme* . ★ . ! + □

★ □ . **theme.** □ □ °

↳ Our theme is to empower the community through artificial intelligence(Ai)

✂ **problem** ↘

↳ Visually impaired individuals commonly face a similar problem which is the ability to navigate through physical environments such as crowded streets, public buildings, or unfamiliar places

★ □ ° . **Target audience: Visually impaired** 90

□ □ The issue that we are solving is movement and identification of objects and surroundings like in crowded areas, restaurants, hawkers and many more common spaces.

✖ *what our project is about* ° ★ °

✖ many people may not be as fortunate as us to see and avoid obstacles so I-CANC is here to help!

- it can help the user **easily** travel from and to places without much difficulty
- It will inform the user of what obstacle they are approaching

E.g of applications ↷

- ☐ Enhanced environmental understanding
 - Can analyse difficult situations, giving **clear** summaries
 - Able to identify **specific** items [reliability]
- ☐ safe navigation
 - Can detect obstacles to prevent accidents

✿ *how it functions* ☐ ☐ ☐

✿ Main function of the device % ↩ ↪

→ Helps guide visually impaired users when traveling from **one place to another**. ☐

- ☐ Using a click of a button, '-
- ☐ improves **safety**, '-

🎵 what's needed° ↩ ↪

- ↪ a electronic device
- ↪ a pair of wired earphones ☐ ☐ ☐
- ↪ our code

🌀 how it works.° ↩ ↪

☐ ☐ The device is place/ worn around the neck at chest level, using its camera to detect obstacles ahead. The code identifies objects and describes them through the earphones, guiding the user in real time.

How the solution came about

Human library during school assembly

The school invited people. Example: Mr Kalai Vanen, the paralympic powerlifter for team singapore.

One unique thing about our solution is...

It is a simple concept that can help the visually impaired to have a easy way of coping with their daily lives.

Increases users confidence to travel; have an encouraging mindset + improved physical being

If we could improve our solution

- We would have spent more time researching about computer vision or other different solutions
- Improving the accuracy of the description

✦ □ + ***QNA time!!*** (^.^)§
